## COMMERCIAL INFORMATION TECHNOLOGY SYSTEMS

**INFORMATION TECHNOLOGY** is the life blood of any organization. It's the telephone system that enables communication. It's the network that connects various systems or locations one to another. It's the sharing and transferring of data anywhere in the world. It's electrical power and connections that make all the pieces work together.

At VT Milcom, we provide solution oriented planning, design, installation, and testing solutions for information technology systems.

Our clients come to VT Milcom looking for solutions to their varying information technology needs. These clients include a variety of commercial and institutional organizations. Hospitals and healthcare facilities ... houses of worship ... banks ... hotels ... educational facilities ... retail ... commercial development ... and more. All of these industries have turned to VT Milcom to satisfy their information technology needs. Whether it's security and surveillance, video teleconferencing, local and wide area networking, data and telecommunication systems, cabling systems or electrical construction, VT Milcom planning and design professionals and installation/field technicians are trained and skilled in identifying specific needs and providing the optimal solutions to those needs.

**TURNKEY.** Ready for immediate use or operation. At VT Milcom, we bring all the components together to provide our clients a turnkey system. When we have completed an assignment, our clients are operational. That means there's more than technology involved.

- Our work approach includes on-site project management with experienced team leaders and professionals and technicians who are fully certified in all the network systems.
- Our team members are trained in specialty programs conducted by the nation's leading cable manufacturers so that we can offer our clients extended warranties for their network infrastructure.
- Our BICSI-certified engineering and technical personnel work closely with clients to develop their IT solutions. Immediate needs are met and solutions are developed to exploit future technological advancements in Structured Cabling Systems, Security and Surveillance Systems, Health Care Communication Systems, Video Teleconferencing Systems, Electrical Systems, and Network Integration Services.

"... The installation is not only functional, but attractive; your technicians performed challenging field engineering and installation with considerable skill. You should regard this as a great success. I know we do ..."

President  
Andersen Consulting, Valparaiso, FL

"... The professionalism and dedication to your work are reflected in the jobs you did at the Ted Constant Center and at the Engineering and Computational Sciences Building ... they were nothing short of spectacular and the success of both buildings would not have been possible without your efforts. I look forward to many more years of successful projects with VT Milcom ..."

Manager  
Telecommunications Systems Support  
Old Dominion University, Norfolk, VA

"... VT Milcom has kept this Campus up and running with all the professionalism and cooperation that one could ask for. You've been quick to react to any emergency day and night, twenty-four/seven, and your Engineers, Technicians and Staff have been extremely helpful in all areas of UWF's active environment. We've had wonderful business relations with VT Milcom for the last seven years and hope to continue that relationship in the future ..."

Plant Operations and Maintenance  
University of West Florida, Pensacola, FL

**STRUCTURED CABLING SYSTEMS.** Data networks require ever increasing speed and capacity. The cabling system that supports these networks must be designed to meet current needs and have the ability to expand to fully meet future requirements. Whether it's ten stations or 10,000, VT Milcom provides turnkey support from needs analysis, planning and design, through installation and improvement.

**ELECTRICAL SYSTEMS.** Providing integrated design services through the installation of all electrical systems is one of our key strengths. Our professionals and technicians are certified, licensed, and experienced in electrical infrastructure design and engineering, power distribution, computerized building control and instrumentation systems and overall integration.

**SECURITY AND SURVEILLANCE SYSTEMS.** When developing a system for the security of personnel and assets, our comprehensive turnkey services bridge the difference between something that just works and something that works great. Our trained professionals and technicians identify the potential threat areas and control points for our clients and bring the design, selection of appropriate equipment (including closed circuit television, access control systems, and intrusion detection and alarm systems) and a phased approach to fruition.

**VIDEO TELECONFERENCING (VTC) SYSTEMS.** As our world gets smaller, the importance of face-to-face communication becomes greater. At VT Milcom, we work with our clients to identify known and unknown needs that will support their financial, legal, brand, training and togetherness issues. Whether it's a customized multimedia boardroom or a roll-about or desktop VTC system, we create the turnkey operation that works. We also incorporate life cycle maintenance and end-of-life system replacement services to ensure your technology stays current.

**INTEGRATION OF NETWORK SYSTEMS.** Local Area Networks (LAN). Wide Area Networks (WAN). Wireless Networks. The technology is continually evolving, changing. VT Milcom is there to plan, design, install and maintain the systems that meet your needs, today and tomorrow. Our trained and certified professionals are recognized worldwide for their expertise in bringing all the pieces together.

**COMMUNICATIONS SYSTEMS.** Whether we are enhancing an existing telephone system purchased by a client or planning, design and installing a complicated nurse call system for a healthcare provider, VT Milcom has the knowledge and know how to meet our clients' needs.

**OUTSIDE PLANT CONSTRUCTION.** Copper, fiber optic, coax – it's all standard operation to us. Our team members have decades of experience with a variety of OSP project types providing us familiarity and understanding of standards, practices and regional differences that will affect each client's solutions.
